How to Use

Start your students wherever you feel is right, you do not have to go in order- you know your students best!

Move through each unit in order, the difficulty progresses throughout, if your student is struggling, repeat the beginning of the unit until you see success.

Use real life manipulatives to reinforce! All of the visuals in these units can easily be found in any school.

Introduce each unit with my Simple Math Adapted books- all the same topics included, it gives you a perfect starting point or reference book!

Cut up the posters to make flash cards, or laminate for reference sheets!

Use for alternative assessment! These worksheets were created with state assessments in mind, collect your students work throughout the year to show progress!

Differentiating

It's up to you how to implement!

Here's some ideas!

Make a binder for each child, and have them work through it in order.

Print and copy for weekly math folders, and leave a post it where each child left off, repeat pages they are not mastering before moving on.

Laminate all pages and have students move through like a workbox, then you can erase for the next student or for review.

Have a pile of all worksheets for every student in separate binders and pull a worksheet daily for them to work on.
